                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -i- FUNCTION: The muscarinic acetylcholine receptor mediates various cellular responses, including inhibition of adenylate cyclase, breakdown of phosphoinositides and modulation of potassium channels through the action of G proteins. Primary transducing effect is PI turnover.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SUBCELLULAR LOCATION: Integral membrane protein. SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homo sapiens (Human).

The present sequence is that of a mouse histamine receptor of the H4 subtype, as predicted from a cDNA clone isolated from a spleen cDNA library. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AAI70980-83) and polypeptides (see AAM50564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the histamine H4 receptor. Such modulators may be useful

The present sequence is that of a rat histamine receptor of the H4 subtype, as predicted from a cDNA clone isolated from a spleen cDNA clubtype, as predicted from a cDNA clone isolated from a spleen cDNA clubrary. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AA170980-83) and complete the combinant host calls that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of thistamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the histamine H4 receptor. Such modulators may be useful for diagnosing, treating or preventing asthma, allergy, inflammation, cardiovascular and carebrovascular disorders, non-insulin dependent diabetes mellitus, hyperglycemia, constipation, arrhythmia, disorders of the neuroendocrine system, stress and spasticity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is that of a guinea pig histamine receptor of the H4 subtype, as predicted from a cDNA clone isolated from a bone marrow library. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AAI70980-83) and polypeptides (see AAMS0564-67). The nucleic acids have been expressed in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   įs
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                      diabetes mellitus, hyperglycemia, constipation, arrhythmia, disorders of the neuroendocrine system, stress and spasticity
recombinant host cells that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the histamine H7 receptor. Such modulators may be useful for diagnosing, treating or preventing aschma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin dependent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         G protein-coupled receptor; nGPCR; seven transmembrane receptor; signal transduction; schizophrenia; thyroid disorder; renal failure; rheumatoid arthritis; CNS disorder; infection; metabolic disease; cardiovascular disease; proliferative disorder; hormonal disorder; neurological disorder; neurological disorder; neurological disorder; attention deficit hyperactivity disorder/attention deficit disorder; Parkinson's disease; migraine; senile dementia; inflammatory disease; rheumatoid arthritis; autoimmune disorder; respiratory ailment;

The present invention relates to novel G protein-coupled receptors (GPCRx; where x is 1, 3, 4, 5, 9, 11, 12, 14-18, 20, 21, 22, 24, 27, 28, 31-38, 40, 41, 53-60) and their coding sequences. The present sequence is one such G protein-coupled receptor. GPCRs are also known as seven transmembrane receptors and function in signal transduction. The nGPCRx coding sequences are useful for screening a human to diagnose a disorder
                                                                                                                                                                                                                                                   affecting the brain or agentic predisposition, specifically schizophrenia. Defection of notices a numeral compounds useful for treating schizophrenia. Detection of noporax in a sample is useful as a flagmostic tool for diseases or disorders, in a sample is useful as a failure, rheumatoid arthritis, CNS disorders, infections such as HIV-1, metabolic and cardiovascular diseases, proliferative disorders and thormonal disorders. Modulators of noporax extivity have the utility for treating neurological disorders, including schizophrenia, ADHD/ADD (attention deficit-hyperactivity disorder/attention deficit disorder), and neuronal disorders who as Alzheimer's disease, Parkinson's disease, migraine and senile dementia additional disorders include inflammatory conditions (e.g. Crohn's disease), rheumatoid arthritis, autoimmune disorders, cancers, respiratory allments such as asthma, and inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ó

Novel splice variants of human H4 histamine receptor, H4b and H4c, useful for identifying agonists or antagonists of the receptor which are useful for treating multiple sclerosis, asthma, allergy, psoriasis and stroke.
                                                                                                                                                                                                                                                The invention relates to splice variants of human H4 histamine receptor, H4b and H4c. The invention is useful for identifying an agonist, antagonist or inverse agonist of a mammalian histamine receptor. The agonist, antagonist or inverse agonist of H4b and H4c is useful for treating inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infarction, migraine, chronic obstructive pulmonary disease (COPD), rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, or psoriasis. The present sequence is human H4c protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; G protein coupled receptor; GPCR; transmembrane receptor; identification; agonist; screening; therapeutic; pharmaceutical; mutant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ð
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  d
                                                                                                                                                                                          The invention discloses an isolated human polypeptide, and encoding mucleic acid, for a G protein-coupled receptor (GPCR), particularly the mucleic acid, for a G protein-coupled receptor (GPCR), particularly the communication between cells and their environment and are characterised communication between cells and their environment and are characterised by a serpentine structure that passes through the cell membrane seven times, hence the receptors (TPM). The polymucleotides and polypeptides are useful for identifying an nGPCR allelic variant that correlates with a mental disorder, for isolating an antibody that binds the polypeptide or the polypeptide, for identifying a compound that binds the polypeptide or polymucleotide and/or modulates its biological activity, for screening a human subject to diagnose a disorder, or a genetic predisposition to a disorder, affecting the brain or a genetic disposition to the disorder. Cor identifying a compound useful as a modulator of binding between corrective and for identifying a compound useful as a modulator of binding between not identifying a compound useful as a modulator of binding between corrective and for identifying a compound useful as a modulator of binding between corrective and for identifying a compound useful as a modulator of binding between corrective in particularly useful, using gene therapy, for treating e.g. anxiety disorders, depression, bipolar disorder, schizophrenia, corrective in a disease, manic depression, stroke, Parkinson's be used for treating diabetes, inflammation or wounds. The sequences corrective the packers or hardened in Abeliane's land public acid and polypeptide may also be used for treating diabetes, inflammation or wounds. The sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes transmembrane receptors, preferably human g protein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. The present amino acid sequence is the hRUP7, an endogenous human orphan G protein-coupled receptor (GPCR). The full length hRUP7 cDNA was cloned by RT-PCR using human peripheral leucocyte cDNA as template. The orphan GPCR of the invention, like all GPCRs has seven transembrane alpha helices with an extracellular N-terminus and an intracellular C-terminus. However, no endogenous ligands has yet been identified for the proteins of the invention. The orphan GPCRs may be used in the identification of their endogenous ligands, and to screen potential GPCR agonists and antagonists for use as pharmaceutical agents. The proteins may also be antagonists for use as pharmaceutical agents. The proteins may also be their precise role in normal and diseased human conditions. Nucleic acid encoding human orphan GPCRs may be used for tissue localisation in expression analysis to provide information about their function in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel human orphan G protein-coupled receptors and the encoding cDNAs for use in the identification of G protein-coupled receptor agonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             G-protein coupled receptor, GPCR; PFI-013; antiallergic; antiasthmatic; antiinflammatory; vasotropic; antidiabetic; anorectic; cytostatic; human; osteopathic; neuroprotective; nootropic; dermatological; gynecological; signal transduction.

The present sequence is that of the human G protein-coupled receptor protein BG26, which shows significant homology with histamine H3, with activity of binding to histamine and capable of changing intracellular cAMP concentration in response to its simulus. The protein is applicable as a tool in screening ligands or drug candidates for regulating signal transduction from such protein and treating diseases associated with its

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             엄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This is a human G-protein coupled receptor (GPCR)-like polypeptide, PFI-
013, encoded by CDNA of NOTMB 41073. The PFI-013 protein can be expressed
by standard recombinant methodology. Antibodies and modulators of PFI-013
care useful in the manufacture of a medicament for treating allergic
disorder, including extrinsic asthma, immunological disorders, such as
intrinsic asthma, vasculitic granulomatous disease, including chronic obstructive pulmonary disease
intrinsic asthma, vasculitic granulomatous disease. Interstitial and
cher pulmonary disease, including chronic obstructive pulmonary disease
coppi, infectious, inflammatory disease, such as inflammatory bowel
disease and neoplastic and myeloproliferative diseases. They are also
cuseful for treating obsetty, diabetes, metabolic, meurological disease,
psychotherapeutics, urogenital disease, reproduction and sexual medicine,
inflammation, cancer, tissue repair, dermatology, photoageing, skin
conflammation, osteoporosis, cardiovascular, gastrointestinal diseases,
allergy and respiratory disease, sensory organ disorders, sleep disorders
and hair loss. The PRI-013 protein and nucleic acid are useful in the
diagnosis and treatment of the above conditions and also for screening
crand hair loss. The PRI-013 protein and nucleic acid are useful in the
diagnosis and treatment of the above conditions and also for screening
crand candidates for the treatment of diseases associated with signal
cransduction. The antibodies are also useful for enrichment of
cransduction and also useful for enrichment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human, G protein-coupled receptor protein BG26; histamine H3; histamine; altering intracellular cAMP concentration; regulating signal transduction.
                                                                                                                                                                                                                                                                                                                                                                                            New G-protein coupled receptor-like polypeptide, polynucleotide for screening drug candidates for treating diseases associated with signal transduction e.g. allergic, inflammatory, pulmonary, neoplastic diseases.

PREVEST. GERVES is a new type of histamine receptor which is preferentially expressed in peripheral leukocytes and on stimulation with histamine causes a change in intracellular calcium ion concentration. GPRVS3 is useful in the identification of antagonists and agonists of histamine binding to GPRVS3 which can be used for the treatment and prevention of histamine-associated disorders. Also, since the receptor protein is preferentially expressed in tissues (especially in peripheral leukocytes) other than those associated with the known histamine receptor types H1-H3 it is useful in the investigation of the role of histamine and its receptors in the tissues in which it is expressed cation of agonists and antagonists as drugs active in histamine-The invention relates to human G-protein coupled histamine receptor Gene encoding a G-protein coupled histamine receptor protein for Claim 1; Page 42-43; 51pp; Japanese. related disorders.

the invention relates to the numan of protein-coupled receptor AXOR35 cand variants of the analysis of and variants of the numan of protein-coupled receptors, AXOR35 has and variants. Like all G protein-coupled receptors, AXOR35 has considered in signal transduction. AXOR35 has compared and structural similarity with G protein-coupled receptors such as the human histeranian H3 receptor. The invention also relates to recombinant expression of AXOR35, and to an AXOR35-specific antibody. AXOR35 proteins and nucleorides may be used to treat a wide variety of disorders including bacterial fungal, protozoal and viral infections, particularly HIV-1 or HIV-2 infections; pain; cancers; benign prostatic hypertension; and nucleorides may be used to treat a wide variety of disorders including bacterial fungal, protozoal and viral infections, particularly datetes; obesity; anorexis, bulimia; osteoporosis; asthma; allergies; urinary retention; acute heart failure; hypotension; hypertension; andibetes; obesity; anorexis, bulimia; osteoporosis; asthma; allergies; contains and severe mental of percoris; myocardial infarction; stroke; ulcers; migraine; vomiting; percoris; myocardial infarction; stroke; ulcers; migraine; vomiting; continous and depression, depression, delirium, dementia, and severe mental continous and depression, depression, delirium, dementia, and severe mental continous and used in soreening compounds for their ability to mathbodies are useful as vaccinies, and AXOR35 proteins, and dyskinesis, and AXOR35 proteins, mucleotides and antibodies are also the detection of lymphocytes, macrophages, eosinophils or neutrophils in contained and the detection of abnormal levels of protein or manal against the detection of mutations in the corresponding gene. AXOR35 proteins are considered as manaled and adaptors of a sethmatic lung. AXOR35 proteins and antibodies are also useful for inducing an immunological response in a manale against the above diseases, and for antibody production. The present of the above diseases, a treating cancer, autoimmune, pulmonary, cardiovascular and neurological disorders and for identifying modulators useful for treating asthma. the invention relates to the human G protein-coupled receptor AXOR35 Novel G-protein coupled receptor polypeptide and polynucleotide for Claim 1; Page 50-51; 54pp; English. sequence represents human AXOR35

this sequence represents a nove numer of process.

This sequence represents a nove numer of process.

C designated nGPCR-2067. Like all GPCRs, nGPCR-2067 has 7 putative transmembrane domains and is involved in signal transduction. The molecular acids encoding nGPCR-2067, to recombinant expression of nGPCR-2067 mucleic acids encoding nGPCR-2067, to recombinant expression of nGPCR-2067 acivity. nGPCR-2067 acivity. nGPCR-2067 acivity. nGPCR-2067 mucleic acid sequences may be used to isolate nGPCR-2067 acivity. nGPCR-2067 and species homologues and may also be used in genetic mapping. The invention also discloses the use of nGPCR-2067 nucleic acids in screening for a predisposition to nGPCR-2067 acids cacids in screening cfor a predisposition to nGPCR-2067 acids cacids in screening cfor a predisposition to nGPCR-2067 acids cacids in screening cfor a predisposition to nGPCR-2067 acids and nGPCR-2067 mucleic acids in screening cfor a predisposition to nGPCR-2067 mucleic acids in screening cfor a predisposition to nGPCR-2067 mucleic acids in screening cfor a predisposition to nGPCR-2067 mucleic acids in screening cfor a predisposition to nGPCR-2067 mucleic acids in screening cfor a predisposition to nGPCR-2067 mucleic acids in screening cfor a predisposition to nGPCR-2067 mucleic acids in screening cfor acids may also be used in the design of artisense cfor modulators may be used to treat a wide variety of medical conditions, particularly mental disorders, central nervous system neurological and psychotic disorders such as Huntingcon's dementia, Alzheimer's disease, and may also be used to reat a wide variety of medical criserates, schizophrenia, migraline, depression, anxiety, bipolar disorder, dementia, Alzheimer's disease, and may also persession, anxiety, bipolar disorder, dementia, thyroid disorders, cardiomy cardiomy cardiomy cardiomy cardiomy cardiomy, papertension, thrombosis, myocardial infarction, obesity, and hypertension, thrombosis, anyocardial infarction, acids myocardial infarction, acids may acid and a sequence represents a novel human G protein-coupled receptor (GPCR)

searching

This sequence represents the amino acid sequence of a human histamine receptor (HR) designated SP9144. The sequence was isolated by searching databases with the sequence of known G-coupled protein receptor (GCPR). The gene is used for recombinant production of HR and for preparing antibodies (Ab). These Ab are used to purify HR by immunoaffinity chromatography, in immunoassay of histamine receptor, to identify CDNA clones that express the receptor, as antagonist to block binding of histamine (for treating any histamine-associated disorder) and to generate anti-idiotypic antibodies. Agonists and antagonists of the HR protein can be used in the treatment of e.g. inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infarction, migraine, chronic obstructive pulmonary disease, rhemmatoid arthritis, multiple sclerosis, inflammatory bowel disease and psoriasis

Novel mammalian histamine receptor polypeptide useful for identifying agonist or antagonist for treating diseases such as inflammation, asthma, stroke, migraine, rheumatoid arthritis, multiple sclerosis, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence represents a histamine receptor. The polypeptide is useful for identifying an agonist or antagonist of a mammalian histamine receptor. It is useful as an antigen to elicit the production of antibodies. The histamine receptor polypeptide and polynucleotide are useful in the treatment and management of diseases such as inflammation, migraine, chronic obstructive pulmonary disease (COPD), rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease and psoriasis. They are also useful for modulating intracellular second messenger. They are also useful for modulating intracellular second messenger pathway activated through histamine receptors (cyclic-AMP, calcium, incellular growth rate, secretion of hormones, receptor-stimulated Ca2+mobilization, mitogenic effects, etc
                                                                                                                                                                                                                                                                        Human; histamine receptor; receptor; inflammation; asthma; allergy; atopic dermatitis; stroke; myocardial infection; migraine; chronic obstructive pulmonary disease; COPD; rrhumatoid arthritis; multiple sclerosis; inflammatory bowel disease; psoriasis; inflammatory bowel disease; psoriasis; intracellular second messenger pathway; cellular growth rate;

absence of agonist).

-i- STBSUE SPECIFICITY: Expressed primarily in the bone marrow and absence of agonist).

-i- TISSUE SPECIFICITY: Expressed primarily in the bone marrow and eosinophils. Shows preferential distribution in cells of momnocytes, mast cells, neutrophils. Also expressed in a wide momocytes, mast cells, neutrophils. Also expressed in a wide momocytes, mast cells, neutrophils. Also expressed in a wide wariety of peripheral tissues, including the heart, kidney, lung, pancreas, skeletal muscle, prostate, small intestine, spleen, fetal liver and lymph node.

-i- INDUCTION: Expression is either up-regulated or down-regulated upon activation of the lymphoid tissues and this regulation may depend on the presence of IL-10 or IL-13.

-i- MISCELLANEOUS: Does not bind diphenhydramine, loratadine, ranitidine, cimetidine and chlorpheniramine. Shows modest affinity ranitidine, cimetidine and chlorpheniramine. Shows modest clorapine, immepip and imetit. The order of inhibitory activity or closenpropit burimmande closapine behaves as impromidine show some agonist, dimaprit, and clobenpropit burimmande shows inverse agonism (enhances CAMP afull agonist. Thioperamide shows inverse agonism (enhances CAMP activatives was Histamine > N-alpha-methylhistamine > R(-)-alpha-methylhistamine > Both N-alpha-methylhistamine > R(-)-alpha-methylhistamine > Both N-alpha-methylhistamine > R(-)-alpha-methylhistamine > R(-)-alpha-met

FUNCTION: The H3 subclass of histamine receptors could mediate the profession and peripheral nervous system. Signals histamine signals in CNS and peripheral nervous system. Signals through the inhibition of adenylate cyclase and displays high constitutive activity (spontaneous activity in the absence of

Signals through the inhibition of adenylate cyclase and displays high constitutive activity (spontaneous activity in the absence of agonist). Agonist stimulation of isoform 3 niether modified adenylate cyclase activity nor induced intracellular calcium mobilization.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Coge F., Guenin S.-P., Audinot V., Renouard-Try A., Beauverger P., Macia C., Ouvry C., Nagel N., Rique H., Boutin J.A., Galizzi J.-P.; "Genomic organization and characterization of splice variants of the

                                                                                                                                                                                                                                                                                                                                                                                                                                        -1- TISSUE SPECIFICITY: Expressed predominantly in the CNS, with the greatest expression in the thalamus and caudate nucleus. The various isoforms are mainly coexpressed in bath, but their relative expression level varies in a region-specific manner. Isoforms 3 and 7 are highly expressed in the thalamus, caudate nucleus and cerebellum while isoforms 5 and 6 show a poor expression. Isoforms 5 and 6 show a high expression in the amygdala, substantia nigra, cerebral cortex and hypothalamus. Isoform 7 is not found in hypothalamus or substantian nigra.

-!- DISEASE: Defects in HRH3 are a cause of Shy-brager syndrome (MIN:146500]. This syndrome is characterized by orthostatic hypotension, bladder and bowel incontinence, anhidrosis, iris atrophy, amyotrophy, ataxia, rigidity and tremor.

-!- MISCELLANEOUS: Does not bind to cimetidine and tripolidine. Shows modest affinity for thioperamide, imetit, N-alpha-methylhistamine and R(-)-alpha-methylhistamine. Isoform 4 is unable to bind to iodoproxyfan while isoforms 1 and 3 bind it with high affinity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                EXTRACELLULAR (POTENTIAL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            EXTRACELLULAR (POTENTIAL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CYTOPLASMIC (POTENTIAL).

Mol. Pharmacol. 55:1101-1107(1999).
-!- FUNCTION: The H3 subclass of histamine receptors could mediate the histamine signals in CNS and peripheral nervous system. Signals through the inhibition of adenylate cyclase and displays high constitutive activity (spontaneous activity in the absence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TISSUE SPECIFICITY: Expressed abundantly in brain, most notably throughout the thalamus, the ventromedial hypothalamus and the caudate nucleus. Isoform 1 is largely predominant in all tissues. This proxyfan acts as a potent neutral antagonist while this proxyfan and FUB465 act as potent inverse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                    MEDLINE=99278519; PubMed=10347254;

Submitted (DEC-2000) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Receptor for cysteinyl leukotrienes. The response is mediated via a G-protein that activates a phosphatidylinositol-calcium second messenger system (By similarity).
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
(in isoform 2).
(potential).
(in 180form 2).

Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: Receptor for prokineticin 2. Exclusively coupled to the G(q) subclass of heteromeric G proteins. Activation leads to mobilization of calcium, stimulation of phosphoinositide turnover and activation of p44/p42 mitogen-activated protein kinase (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              nucleus, lateral globus pallidus and amygdala. Highest expression seen in paraventricular thalamic nuclei and is also extensively expressed in the suprachiaematic nucleus.
SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SUBSCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: Expressed in several regions of the brain, including paraventricular hypothalamic nucleus, dorsal medial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           hypothalamic nucleus, paratenial thalamic nuclei, paracentral thalamic nucleus, lateral habenular nucleus, lateral septal

Prokineticin receptor 2 (PK-R2) (G protein-coupled receptor 73-like 1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MEDLINE=2205031; PubMed=12054613; MEDLINE=2205031; PubMed=12054613; Masuda Y., Takatsu Y., Terao Y., Kumano S., Ishibashi Y., Suenaga M., Abe M., Fukusumi S., Watanabe T., Shintani Y., Yamada T., Hinuma S., Inatomi N., Ohtaki T., Onda H., Fujino M., Isolation and identification of EdvBGF/prokineticins as cognate ligands for two orphan G-protein-coupled receptors."; Biochem. Biophys. Res. Commun. 293:396-402(2002).

I. FUNCTION: Receptor for prokineticin 2. Exclusively coupled to the G(q) subclass of heteromeric G proteins. Activation leads to mobilization of calcium, stimulation of phosphoinositide turnover and activation of p44/p42 mitogen-activated protein kinase (By
                                                                                                                                                                                                                                                  Gaps

J. Biol. Chem. 277:19276-19280(2002)

Growth Receptor for prokineticin 1. Exclusively coupled to the cip subclass of heteromeric G proteins. Activation leads to mobilization of calcium, stimulation of phosphoinositide turnover and activation of p44/p42 mitogen-activated protein kinase.

FISSUE SPECIFICITY: Expressed in the stomach, throughout the small intestine, colon, rectum, thyroid gland, pituitary gland, salivary gland, adrenal gland, testis, ovary, brain, spleen, prostate and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SEQUENCE FROM N.A.

ligands for two orphan G-protein-coupled receptors.";

Blochem. Blophys. Res. Commun. 293:396-402(2002).

-I-FUNCTION: Receptor for prokineticin 1. Exclusively coupled to the
G(q) subclass of heteromeric G proteins. Activation leads to
mobilization of calcium, stimulation of phosphoinositide turnover
and activation of p44/p42 mitogen-activated protein kinase (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
